Decision process: Study Planner

For my StudySync website, I will create a study planner that helps students decide which assignment to focus on. The deciding factors will be the assignment's due date, how much it's worth toward the student's grade, and whether it will be difficult or time-consuming.

Decision Node 1: Is the assignment due within 24 hours?

- Yes: The student should work on the assignment immediately because the deadline is approaching.
- No: Move to the next decision because there is still time before the assignment is due.

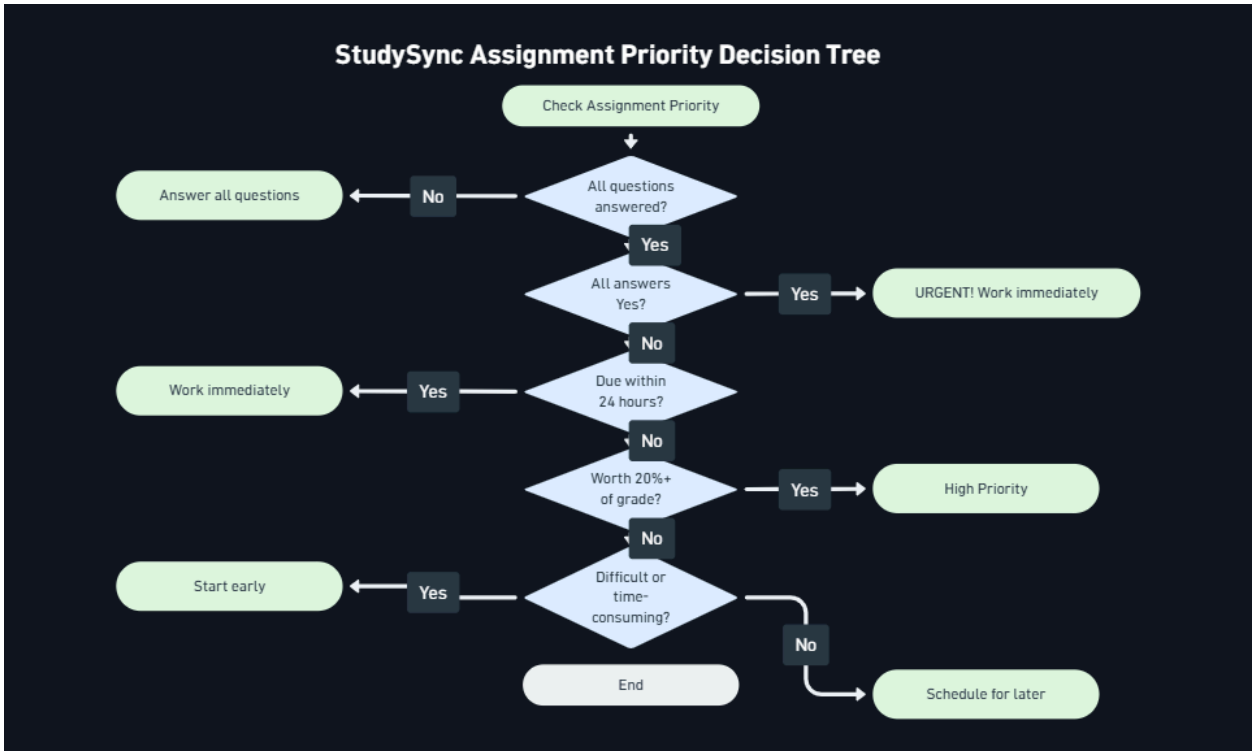

Decision Node 2: Is the assignment worth 20% or more of the student's grade?

- Yes: The student should prioritize the assignment because it has a large impact on their overall grade.
- No: Move to the next decision because the assignment has a smaller impact on their grade.

Decision Node 3: Is the assignment difficult or time-consuming?

- Yes: The student should start the assignment early because it may require more time to complete.
- No: The student can schedule the assignment for later because it is less urgent and easier to complete.

Flow Chart:

StudySync Assignment Priority Decision Tree
