

Identifying My Product & Target Audience

What problem does our product website solve or address?

The most challenging thing about college isn't the work or living with others, but time management. College students have to balance classes, assignments, exams, work, deadlines, and personal responsibilities. This makes it difficult for most students to keep track of their schedules most of the time; their schedules are being tracked across multiple different apps. That's where StudySync comes in; it addresses the problem by providing students with a place they can manage their work, school, and personal life schedules.

What is your product idea? How does your website support this idea and help solve the problem?

StudySync is a productivity-based website based on productivity designed to help college students balance their busy work, school, and personal schedules on one site. StudySync will track assignments and deadlines while managing their work and class schedules, and schedule study sessions. The StudySync website will introduce the product and demonstrate how its features can help students stay organized. The website will include prototype pages that show how users could manage their tasks, schedules, and study sessions.

What type of website are you building?

StudySync will be a web-based application that will promote and explain the concept behind the site while providing a prototype that will showcase the app's main features.

What is your mission statement?

StudySync's mission statement is to help college students manage their busy and complex schedules by putting their work, school, and personal schedules all in one simple and accessible platform.

Profile Of Target Audience

The primary audience for StudySync is college students between the ages of 18-25, designed for students who need to manage multiple responsibilities like classes, work, hobbies, and deadlines.

- **Web Behavior**
 - Web usage: Daily
 - What kind of device do they use to access the web: Laptops, smartphones, and tablets.

Fictional Visitors

Name	Sex	Age	Location	Occupation	Income	Web usage
Marcus Johnson	Male	21	Providence , RI	College student and part-time retail worker	\$18,000	Laptop and smartphone daily
Emily Carter	Female	19	Boston, MA	Full-time college student	\$8,000	Laptop and smartphone daily
Jordan Lee	Non-birany	24	Hartford, CT	College student and part-time worker	\$30,000	Laptop and smartphone daily

Reasons for Visiting and User Tasks

Marcus Johnson

Marcus is a college student who works part-time. He needs to balance his class schedule with his work schedule while making sure he has enough time to complete his assignments.

Reasons for visiting StudySync:

- Organize assignments and deadlines
- View his class schedule
- Plan study sessions around work
- Keep track of upcoming responsibilities

Tasks:

1. Add an assignment with a due date.
2. View his weekly calendar.
3. Schedule a study session around his work hours.
4. Mark a completed assignment as finished.

Emily Carter

Emily is a full-time college student who wants to stay organized and avoid missing assignments, exams, or other important academic events.

Reasons for visiting StudySync:

- Check upcoming deadlines
- Organize classes
- Plan study sessions
- Keep track of important academic events

Tasks:

1. View upcoming assignments.
2. Check her class calendar.
3. Add an upcoming exam.
4. Create a study session.

Jordan Lee

Jordan is a college student who works part-time and has several responsibilities outside of school. Jordan needs a way to see school, work, and personal activities together.

Reasons for visiting StudySync:

- Balance school, work, and personal activities
- Organize multiple classes
- Track assignments and deadlines
- Plan time for studying

Tasks:

1. Add classes to the calendar.
2. Add work and personal events.
3. View upcoming deadlines.
4. Create a weekly study plan.

Website Requirements

Primary goal: Introduce college students to StudySync to help them understand how it helps them organize their school, work, and personal responsibilities in one place

Most Important User Action: Create an account and get started with StudySync.

Content & Features

- **Essential Features:**
 - Assignment and task tracker
 - Deadline tracking
 - Class schedule
 - Work schedule
 - Personal events
 - Study sessions
 - Task completion/progress tracking
- **Critical Pages:**
 - **Home:** Introduces StudySync and its main features.
 - **About:** Explains what StudySync is and who it is designed for.
 - **Dashboard:** Shows assignments, deadlines, schedules, and progress.
 - **Calendar:** Displays classes, deadlines, work, personal events, and study sessions.
 - **Tasks:** Allows users to organize and complete assignments and other tasks.
 - **Contact:** Allows users to contact the StudySync team.
- **Homepage Highlights:**
 - StudySync introduction
 - Explanation of the problem it solves
 - Main features
 - Example dashboard
 - "Get Started" button

Look & Feel

- **Inspiration Websites:**
 - **Google Calendar:** Inspiration for its organized calendar and scheduling system.

- **Notion:** Inspiration for its clean interface and organization features.
- **Overall Style:** Modern, clean, playful, and organized.
- **Color Scheme:** Blue, white, and gray with an accent color for important information and completed tasks.
- **Font:** Inter or Open Sans.
- **Imagery:** Calendars, schedules, tasks, dashboards, and other visuals related to organization and productivity.
- **Personality:** Calm, organized, productive, and Playful.
- **Overall Goal:** Make StudySync feel simple and easy to use rather than crowded or complicated.

SDLC Approach & Timeline

SDLC Approach

- **Development Model:** Agile
- **Reason for choosing Agile:** StudySync will be developed in smaller stages so that the design and functionality can be tested and improved throughout the development process.
- **Main benefit:** Allows changes to be made based on testing, feedback, and accessibility checks instead of waiting until the entire website is finished.

Timeline

Week	Phase	Main Tasks
Week 1	Planning	Define StudySync, target audience, goals, and website requirements.
Week 2	Research	Research similar websites, user needs, accessibility requirements, and design ideas.
Week 3	Design	Create the StudySync logo, site map, and wireframes.

Week 4	HTML Development	Build the basic structure and pages of the website using HTML.
Week 5	CSS Development	Add styling, layout, colors, fonts, and responsive design.
Week 6	JavaScript Development	Add interactive features and basic functionality.
Week 7	Testing	Test navigation, links, interactive features, responsiveness, and usability.
Week 8	Accessibility	Check accessibility using tools such as WAVE and Google Lighthouse and make improvements.
Week 9	Finalization	Make final revisions, fix issues, organize files, and prepare the website for submission.

Agile Development Cycle

Plan → Research → Design → Develop → Test → Improve → Repeat

The website will be reviewed and improved throughout development rather than only at the end of the project.

Accessibility

StudySync will be designed with accessibility in mind from the beginning of development.

- **Visual Accessibility**
 - Use strong color contrast between text and backgrounds.
 - Use readable font sizes and clear typography.
 - Provide descriptive alt text for important images.
 - Do not rely only on color to communicate information.

- **Hearing Accessibility**
 - Provide captions or text alternatives if videos or audio are added.
 - Make sure important information is also available as text.
- **Motor Accessibility**
 - Make the website fully usable with a keyboard.
 - Use large, clearly labeled buttons and interactive elements.
 - Provide enough spacing between buttons and links.
 - Avoid requiring precise mouse movements.
- **Cognitive Accessibility**
 - Use simple and clear language.
 - Keep navigation consistent across pages.
 - Organize information into clear sections.
 - Use descriptive labels for buttons and forms.
 - Avoid unnecessary visual clutter.
- **Responsive Design**
 - Make the website usable on desktops, tablets, and smartphones.
 - Ensure text, buttons, navigation, and interactive elements remain accessible on smaller screens.
- **Accessibility Testing**
 - Use **WAVE** to identify accessibility issues.
 - Use **Google Lighthouse** to audit accessibility and overall website quality.
 - Test keyboard navigation and check the website at different screen sizes.
